

**IN THE SPECIFICATION:**

**Please amend the specification on page 11 beginning at line 12 and ending at line 24 as follows:**

In this embodiment, a recording unit (i.e. recorded unit) from a start of a recording operation until the end of this recording operation as described above is defined as a scene. In the video camera 1, a plurality of scenes in a range suited for management by a user are managed as a management unit by a program as shown in Fig. 2, and the range managed by the program as a management unit is set for a recording date. Because of this feature, when data is additionally stored in the recording medium 5, if a scene recorded just ahead has the same date as that provided by an incorporated timer, the additional data is managed by the same program as that for the scene already recorded.

**Please amend the specification on page 21 beginning at line 4 and ending at line 11 as follows:**

With this configuration, by comparing the determination data recorded as described above and obtained from the user domain MNFI\_DT to the recording start time and recording end time for the M\_VOB recorded last in the recording medium 5, whether or not the VOB is recorded in the recording medium 5 by a device not managing a plurality of recording units as one recording unit in batch by a program can be determined.

**Please amend the specification on page 24 beginning at line 10 and ending at line 21 as follows:**

With the configuration as described above, in this video camera 1, an audio stream SA and a video stream SV each acquired by the camera section 2 are multiplexed by the stream processing section 6 to generate a system stream, and this system stream is ~~reecoded~~ recorded in

the recording medium 5 based on the DVD disk system by the recording medium drive processing section 7. Management data for the system stream recording in the recording medium 5 is generated by the management data processing section 8, and this management data is recorded by the recording medium drive processing section 7 in the recording medium 5.

**Please amend the specification on page 26 beginning at line 13 and ending at line 23 as follows:**

However, when the recording medium 5 is further removed to from the video camera 1 and is used for recording additional scenes on the same day as that when the TV program is recorded, if there is no contrivance to respond to the situation as described above in the video camera 1, management data is recorded so that the additionally recorded scenes are managed by the program managing the TV program. Namely in this case, the TV program is reproduced and the additionally recorded scenes such as a landscape are recorded in succession to the end of the TV program.
